December 2024: chiropractic adjustment, imaging, massage therapy, physical therapy	4	$1,585.39
January 2025: pain management	1	$660.94

Treatment summary

Patient presented following a rear-end motor vehicle collision with reported head impact and immediate post-traumatic symptoms consistent with concussion. The mechanism of injury and the force involved are well matched to the injuries described at intake. Neurological examination and imaging findings clearly confirm the diagnosis of concussion with post-concussive symptoms including headache, dizziness, light sensitivity, and difficulty concentrating. Patient has no known prior injury to the head or neck. Care was delivered over 27 visits, which is somewhat longer than typical for this injury, with gradual progression through vestibular therapy, graded return to activity, and symptom monitoring. Symptoms improved steadily over the course of care, though recovery was slower in the later weeks. Billing records reflect single charges for each service rendered, with no duplicate or repeated billing entries. Patient is currently improving and is expected to continue a home exercise program with follow-up as needed.
