Treatment History and Summary

Patient:	Zachary Arnold
Treating provider:	Nancy Mcgee, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
June 2024: evaluation	1	$285.64
July 2024: chiropractic adjustment, massage therapy, pain management, physical therapy	4	$1,051.74
August 2024: massage therapy, pain management, physical therapy	5	$1,270.37
September 2024: chiropractic adjustment, imaging, massage therapy	5	$1,823.51

Treatment summary

Patient presented following a rear-end motor vehicle collision with a wrist injury diagnosed as a distal radius fracture. The mechanism of injury, a moderate-speed rear impact with airbag deployment, is consistent with the injury sustained. Over the cousre of 15 visits, the patient received immobilization, serial radiographs showing progressive callus formation, occupational therapy focused on range of motion and grip strengthening, and monitoring for complications. The recovery timeline was somewhat longer than typically expected for this fracture pattern, attributed to stiffness and a slower return of grip strength. Physical examination documented tenderness over the fracture site, reduced wrist flexion and extension, and decreased grip strength on the injured side, while neurovascular testing and sensation remained within normal limits. The patient reports no prior injury or treatment to the affected wrist or forearm. Billing records reflect single charges for each service rendered, with no duplicated or repeated entries. Current prognosis is guarded but improving, with continued therapy and a follow-up evaluation planned.
