August 2025: chiropractic adjustment, imaging, pain management	5	$3,077.43
September 2025: chiropractic adjustment, physical therapy	4	$653.19

Treatment summary

Patient presented following a sideswipe collision during a lane change, reporting neck and low back pain with associated stiffness and headaches. The mechanism of injury is consistent in type and force with the symptoms described. Initial examination showed reduced cerviacl and lumbar range of motion and paraspinal muscle tenderness, supporting a soft tissue strain of the neck and back. Other neurological and orthopedic screening tests were within normal limits. No prior injury to the cervical or lumbar spine is documented in the available history. Care has included 43 visits to date, consisting of chiropractic manipulation, physical therapy, and soft tissue treatment. Over time, the frequency of visits and the number of added service types have increased steadily beyond what is typically expected for a strain of this severity, and the reasons for this escalation are not fully explained in the record. Billing review found no duplicate or repeated charges for the same services. Recommendation is to reassess functional progress and establish a defined discharge plan with clear goals.
