May 2023: chiropractic adjustment, massage therapy, physical therapy	4	$551.43
June 2023: chiropractic adjustment	1	$92.26

Treatment summary

Patient presented following a low-speed collision in a parking lot and was seen for neck strain. The reported mechanism is consistent with the injury pattern observed on examination. Over the course of care, the patient completed 18 visits cnosisting of physical therapy, range-of-motion work, and home exercise instruction. The treatment course followed a typical progression, with visit frequency tapering as symptoms improved and range of motion returned toward baseline. Cervical imaging and clinical examination findings clearly support the diagnosis of cervical strain. The records also show prior treatment to the same region within the past two years. That earlier condition contributes to some of the current complaints, and this has been considered in the overall assessment. Billing records were reviewed and show no dpulicate charges for the same services. At discharge, the patient was improved with residual stiffness on extended positioning, and a home program was provided for continued self-management.
