Month and services	Visits	Charges
September 2023: evaluation, pain management	2	$1,014.22
October 2023: massage therapy, pain management	3	$939.33

Treatment summary

Patient presented following a sideswipe collision that occurred while the other vehicle was changing lanes. The patient reported right knee pain, swelling, and difficulty bearing weight immediately after the impact. The mechanism of inujry described is consistent with the reported symptoms and with the forces typically seen in a crash of this type. Over five clinic visits, the patient received conservative care including rest, ice, a compression wrap, guided physical therapy, and anti-inflammatory medication. Imaging and physical examination findings clearly confirm the knee injury. No prior injury to this body region is known from the patient's history or records. Treatment followed a typical course, with visit frequency and intensity decreasing as the patient's range of motion, strength, and pain improved. Billed services reflect single, appropriate charges for each visit, with no repeated or duplicate entries. The patient was discharged to a home exercise program with instructions to return if symptoms worsen.
