Treatment History and Summary

Patient:	Tracy Davis
Treating provider:	Tommy Griffin, DC
Diagnosis:	concussion

Treatment history by month

Month and services	Visits	Charges
August 2023: chiropractic adjustment, evaluation, imaging, massage therapy, pain management, physical therapy	13	$4,568.03
September 2023: imaging, massage therapy, pain management, physical therapy	4	$1,900.82

Treatment summary

Patient presented following a rear-end motor vehicle collision with reported head impact and subsequent headaches, dizziness, and difficulty concentrating. The mechanism and force of the collision are consistent with the injury described. Over the course of 17 visits, care included symptom monitoring, vestibular and cognitive rest guidance, graded return-to-activity planning, and supportive therapy. Recovery has taken somewhat longer than is typical for a concussion of this kind. Most of the documented complaints are based on the patient's own reoprts of pain and smyptom severity, as neurological examination findings and imaging have been within normal limits. The patient also reported a minor strain to the same region several years ago, which resolved completely without ongoing limitation. Bliling entries for two similar services on the same date are under review for accuracy. Continued follow-up is planned to reassess symptoms and functional capacity.
