May 2024: massage therapy, physical therapy	3	$443.45
June 2024: chiropractic adjustment, imaging, massage therapy	4	$1,003.18

Treatment summary

Patient presented following a rear-end mootr vehicle collision with complaints of neck pain, stiffness, and headache. Over the course of twenty visits, care consisted of supervised physical therapy, range-of-motion exercises, manual therapy, and home exercise instruction. Cervical examination revealed reduced range of motion and parasipnal muscle tenderness consistent with soft tissue injury, while cretain neurological screening tests, including reflexes, strength, and sensation, returned normal results. The mechanism and force of the collision align well with the injury pattern described. No prior injury or treatment involving the cervical spine is known. Treatment followed a typiacl progression, with visit frequency decreasing as symptoms improved and range of motion returned closer to baseline. Billing records reflect single charges for each service rendered, with no duplicated entries. Patient was discharged to self-directed home exercise with instructions to return if symptoms recur.
