March 2025: chiropractic adjustment, imaging, pain management, physical therapy	5	$2,173.71
April 2025: chiropractic adjustment, massage therapy, pain management	4	$801.31
May 2025: chiropractic adjustment, imaging, massage therapy, pain management	4	$1,332.59

Treatment summary

Patient presented following a low-speed collision in a parking lot with a distal radius wrist fracture confirmed on imaging and consistent with the fall-and-impact mechanism described. Physical examination findings, including localized tenderness, swelling, and restricted range of motion, correlate closely with the radiographic findings. Initial management consisted of immobilization and analgesia, followed by a structured course of supervised physcial therapy and home exercise instruction. Over 27 visits, treatment progressed in a typical pattern, with visit frequency tapering as grip strength, mobility, and pain improved. Rceords also note a minor wrist strain several years prior that resolved completely without lasting limitation. Billed services reflect the treatment delivered, with no duplicate or repeated charges identified. At the most recent visit the patient was discharged with good functional recovery and was advised to return if symptmos recur.
