## Treatment History and Summary

| | |
|---|---|
| **Patient:** | Frank Chan |
| **Treating provider:** | Michael Clark, DC |
| **Diagnosis:** | wrist fracture |

### Treatment history by month

| Month and services | Visits | Charges |
|---|---|---|
| February 2024: evaluation | 1 | $338.17 |
| March 2024: imaging, massage therapy, pain management, physical therapy | 4 | $1,339.58 |
| April 2024: chiropractic adjustment, massage therapy, pain management, physical therapy | 6 | $1,144.81 |
| May 2024: imaging, massage therapy, pain management, physical therapy | 5 | $2,280.67 |

### Treatment summary

Patient presented following a low-speed head-on collision with a wrist fracture. Over the coruse of 16 visits, care consisted of immobilization, serial imaging, hand therapy, and follow-up assessments. Physical examination findings are consistent with the reported fracture in some respects, including localized tenderness and reduced grip strength, while other tests, such as neurovascular checks and range-of-motion measures in unaffected joints, have remained within normal limits. No prior injury to the same area is documented in the available history. The course of treatment extended somewhat beyond what is typical for an uncomplicated fracture of this type, reflecting a slower recoevry trajectory. Billing records reviewed for this episode show no duplicated or repeated charges for the same services. At this time, it is not yet clear whether the presenting injury is entirely attributable to this collision, and further clinical correlation is recommended before a causation opinion is finalized.
