Treating provider:	Dean Wilson, DC
Diagnosis:	concussion

Treatment history by month

Month and services	Visits	Charges
May 2024: evaluation, imaging, massage therapy, physical therapy	4	$1,517.19

Treatment summary

Patient presented following a side-impact collision at an intersection with reported head trauma and subsequent concussion symptoms. Over four clinic visits, care consisted of symptom monitoring, cognitive rest guidance, graded return-to-activity instructions, and periodic neurological screening. Several examination findings are consistent with a concussive injury, including reported headache sensitivity and mild balance complaints on exertion, while other testing, including cranial nerve evaluation and reflex assessment, remained within normal limits. At this stage it is not yet clear whether the injury is attributable to this collision, and further correlation with imaigng history and symptom tiemline is advised. No prior injury to the same body region is known from the history obtained. Treatment followed a typical course and tapered as the patient's symptoms improved, with the most recent visit documenting substantial resolution. Billing records reflect one chrage per encounter with no repeated or duplicate entries.
