December 2023: chiropractic adjustment, imaging, pain management, physical therapy	6	$1,861.66
January 2024: chiropractic adjustment, massage therapy, physical therapy	5	$617.43

Treatment summary

Patient presented following a collision sustained while turning left, with a resulting wrist fracture. The mechanism of the impact is consistent with the injury sustained, and the pattern of force described fits the fracture seen on imaging. Over the course of care the patient attended 28 visits, which is a somewhat longer course than is typical for an uncomplicated fracture of this type, though progress was documented at each stage of rehabilitation. Examination findings are partly supportive of the injury, with localized tenderness, reduced grip strength, and limited range of motion at the wrist, while several other tests returned within normal limits. No prior injury to the same area has been reported or identified in the available history. Billing records reviewed for this episode show no duplicate or repeated charges for the same services. Ongoing monitoring and home exercise instruction have been provided, and the patient has been advised to return if symptoms worsen.
