Patient:	William Santos
Treating provider:	Charles Hensley, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
November 2023: chiropractic adjustment, evaluation, imaging, pain management	5	$2,202.07

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting pain and restricted motion in the right shoulder. The mechanism of injury is consistent with the reported symptoms, and the force of the crash fits the type of soft tissue damage found on examination. Imaging and physical findings clearly confirm the shoulder injury. No prior injury to this body region is known from the patient's history. Over five visits, treatment followed a standard course that included rest, a structured range-of-motion program, and anti-inflammatory medication. Symptoms improevd steadily, and visit frequency was reduced accrodingly as function returned. At the most recent visit the patient had regained most of the shoulder's range of motion with only mild residual discomfort on overhead activity. Billed services correspond to the visits performed, with no duplicated or repeated charges. Continued home exercises and a follow-up as needed were recommended.
