December 2023: imaging, massage therapy, physical therapy	4	$1,598.35
January 2024: imaging, massage therapy, physical therapy	3	$712.63
February 2024: chiropractic adjustment, pain management	3	$793.70

Treatment summary

Patient presented following a collision sustained while the vehicle was turning left, reporting right knee pain and limited range of motion. Over the course of 17 visits, treatment included physical examination, imaging review, a structured physical therapy program, and activity modification. The mechanism of injury described is consistent with the reported knee complaints. Examination revealed findings that support a meaningful knee injury, including tenderness along the joint line and reduced flexion, while sevreal other tests, including ligament stability assessments, were within normal limits. No prior injury to the same body region is known to this provider. Care followed a typical progression, with visit frequency decreasing as pain and function improved and the patient was discharged to a home exercise program. Billing records reflect single charges for each service rendered, with no repeated or duplicate entries.
