January 2025: chiropractic adjustment, imaging, pain management, physical therapy	6	$2,676.18

Treatment summary

Patient presented following a sideswipe collision that occurred during a lane change, with the mechanism of injury consistent with the knee complaints reported. Imaging and clinical examination findings clearly confirm the knee injury. There is no record of prior injury or treatment to the same body region. Over the course of care, the patient completed 40 visits. Treatment has extended considerably beyond what is typically expected for this type of injury, with additional visits and new services added progressively over several months. Billing records reviewed for this episode show no duplicate or repeated charges. Ongoing management includes physical therapy, home exercise instruction, and periodic reassessment of range of motion, strength, and functional limitations. Further clinical review is recommended to align the plan of care with expected recovery milestones for this injury.
