Treatment History and Summary

Patient:	Hannah Harris
Treating provider:	Michael Clark, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
April 2025: chiropractic adjustment, evaluation, massage therapy, physical therapy	4	$788.32
May 2025: imaging, physical therapy	3	$1,051.02

Treatment summary

Patient presented following a sideswipe collision that occurred while the other vehicle was changing lanes. The mechanism described is consistent with the wrist injury diagnosed on imaging, which showed a distal radius fracture. Over the course of seven visits, the patient received immobilization, orthopedic follow-up, and a graded home exercise program. Treatment followed a typical course and tapered as range of motion and grip strength improved. Physical examination revealed localized tenderness and swelling over the distal radius and reduced grip strength on the injured side, supporting the fracture diagnosis, while neurovascular testing and sensation remained within normal limits. The patient reports a remote, minor strain to the same wrsit region in the past, which resolved completely without lasting limitation and does not appear to have affected the current presentation. Billing records reflect one charge per scheduled service with no duplicate or repeated entries.
