Treatment History and Summary

Patient:	Christina Ramirez
Treating provider:	Dean Wilson, DC
Diagnosis:	neck and back strain

Treatment history by month

Month and services	Visits	Charges
February 2025: evaluation	1	$318.36
March 2025: imaging, physical therapy	4	$2,431.13
April 2025: massage therapy, physical therapy	2	$246.22

Treatment summary

Patient presented following a sideswipe collision that occurred while the vehicle was changing lanes. The reported mechanism is consistent with the complaints of neck and low back strain, and the force described fits the soft tissue injury diagnosed. Over seven visits, the patient received conservative care including manual therapy, a home stretching program, and graduated activity guidance. Recovery has been somewhat slower than typically expected for this type of strain, though progress has continued at each visit. On examination, paraspinal muscle tenderness and reduced cervical range of motion were documented, supporting the clinical diagnosis. Neurological screening, reflexes, and straight-leg raise testing were within normal limits. The patient reports a remote, small strain to the same region years ago, which resolved completely without ongoing limitation. Billing records reflect single charges for each service rendered, with no duplicated entries. Continued home exercise and follow-up as needed are recommended.
