February 2025: chiropractic adjustment, massage therapy, pain management, physical therapy	5	$1,054.30
March 2025: chiropractic adjustment	1	$101.26

Treatment summary

Patient presented following a rear impact sustained while turning left at low speed, reporting neck and low back pain without loss of consciousness. The mechanism and force of the collision are consistent with the soft tissue strain described, and the patient has no known prior complaints involving these regions. Conservative care was initiated, comprising chiropractic manipulation, therapeutic exercise, and soft tissue work, delivered across 39 visits. Over time the plan expanded, with additional services added in successive months and visit frequency remaining high relative to what is typically expected for a strain of this type. Cervical and lumbar imaging was unremarkable, and physical examination findings are largely based on the patient's reported pain levels, with objective neurological and range-of-motion testing within normal limits. Billing review is ongoing for two similar charges recorded on the same date. Current recommendation is to taper care toward home exercise and reassess function at the next scheduled visit.
