## Treatment History and Summary

| | |
|---|---|
| **Patient:** | Bryan Malone |
| **Treating provider:** | Joseph Bradford, DC |
| **Diagnosis:** | knee injury |

### Treatment history by month

| Month and services | Visits | Charges |
|---|---|---|
| April 2024: chiropractic adjustment, evaluation, massage therapy, pain management | 5 | $1,606.83 |
| May 2024: imaging, massage therapy | 5 | $2,954.47 |
| June 2024: imaging, pain management, physical therapy | 4 | $1,984.01 |
| July 2024: imaging, physical therapy | 2 | $949.23 |

### Treatment summary

The patient presented following a sideswipe collision that occurred during a lane change, with the mechanism of injury consistent with the reported knee complaints. Examination findings and imaging clearly confirm the knee injury, and the presentation aligns well with the kind and force of the crash described. No prior injury to the same body region is known from the history obtained at intake. Care was delivered over sixteen visits and followed a typical course of conservative management, including physical modalities, guided therapeutic exercise, and activity modification. Treatment intensity tapered gradually as functional range of motion and strength improved and pain decreased. Billing records reflect single charges for each service rendered, with no repeated or duplicate entries. At discharge from active care, the patient was progressing toward baseline function, with a plan for an independent home exercise program and follow-up only as needed.
