December 2024: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,824.57
January 2025: imaging, physical therapy	2	$1,145.62

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with complaints of neck pain, stiffness, and restricted cervical range of motion. The reported injury is consistent with the mechanism and force of the impact. Cervical strain was diagnosed, and conservative management was initiated, including manual therapy, stretching, home exercise instruction, and as-needed anti-inflammatory medication. Over 18 visits, treatment followed a typical clinical course, with frequency tapering as symptoms gradually resolved and function improved. Examination findings included paraspinal muscle tenderness and reduced rotation, which support the diagnosis, while neurological screening and imaging-related findings were within normal limits. No prior injury or ongoing complaints involving the cervical spine are known to this provider. Two similar charges submitted on the same date of service are currently under administrative review to confirm they reflect separate, documented services. Patient was discharged from active care with instructions to return if symptoms recur.
