November 2023: imaging, massage therapy, pain management, physical therapy	6	$2,455.06
December 2023: chiropractic adjustment, imaging	3	$1,792.45

Treatment summary

Ptaient presented following a low-speed collision in a parking lot with complaints of neck and low back pain and stiffness. The reported mechanism is consistent with the kind and force of the impact. Over the course of 23 visits, care was delivered in a standard progression of manual therapy, guided home exercise, and graded activity. Symptoms improved steadily, and visit frequency was reduced accordingly as function returned toward baseline. Examination revealed reduced cervical and lumbar range of motion and paraspinal muscle tenderness, which support the diagnosed strain. Certain neurological and orthopedic screening tests were within normal limits. No prior injury or treatment to the cervical or lumbar spine is known to this provider. Billing records reflect single, appropriately spaced charges for each service with no duplicate entries. Prognosis is good with continued home program adherence, and discharge from active care is anticipated.
