Patient:	Edward Luna
Treating provider:	James Arnold, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
October 2023: evaluation, massage therapy, pain management, physical therapy	4	$1,071.84
November 2023: chiropractic adjustment, pain management, physical therapy	6	$2,453.78
December 2023: imaging, massage therapy, physical therapy	3	$973.67

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of right shoulder pain and limited range of motion. The reported mechanism of injury is consistent with the injury pattern observed on examination. Over the course of thirteen visits, care followed a conventional progression, beginning with immobilization, anti-inflammatory medication, and graded physical therapy, and frequency of visits was reduced as symptoms improved. Examination documented reduced active abziction and tenderness over the rotator cuff insertion, which support the diagnosis, while several other provocative and neurovascular tests returned normal results. The patient reports no prior injury or treatment involving this shoulder. Treatment charges were billed once per service, with no duplicated or repeated entries. At discharge from active care, the patient had reganied most functional motion and reported pain at a low level, with a home exercise program continued and follow-up available as needed.
