Treatment History and Summary

Patient:	Stephanie Browning
Treating provider:	Ruben Clark, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
April 2024: evaluation, physical therapy	2	$516.07
May 2024: imaging, massage therapy, pain management, physical therapy	4	$1,367.99

Treatment summary

Patient presented following a low-speed collision in a parking lot with a closed distal radius fracture of the wrist. Over six visits, care consisted of immobilization, serial clinical examinations, and follow-up imaging. Radiographs and the physical examination clearly confirm the fracture, and the described mechanism of injury is consistent with the findings. The patient reports no prior injury to this wrist or the surrounding area, and no earlier treatment for the region is known. Management followed a typical course: initial splinting, prgoression to a removable brace as healing advanced, and gradual reduction in visit frequency as symptoms and range of motion improved. Billing records reflect single, non-duplicated charges for each service rendered. At last follow-up the fracture shoewd expected healing, and the patient was released to graduated activity with home exercises and return precautions reviewed.
