Treatment History and Summary

Patient:	Steven Stanley
Treating provider:	Timothy York, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
March 2025: evaluation	1	$284.83
April 2025: chiropractic adjustment, massage therapy, pain management	5	$1,024.21
May 2025: imaging, massage therapy, pain management, physical therapy	5	$1,783.34
June 2025: massage therapy, pain management	3	$828.82
July 2025: imaging	1	$1,073.56

Treatment summary

Patient presented following a rear-end motor vehcile collision with right shoulder pain and restricted range of motion. The reported mechanism of injury is consistent in kind and force with the shoulder complaints documented at intake. Over the course of fifteen visits, treatment included physical therapy, manual therapy, home exercise instruction, and anti-inflammatory medication. Care continued somewhat longer than is typical for this presentation, and progress was gradual. Examination revealed positive impingement signs and reduced active abduction, which support the diagnosis of a soft tissue injury to the rotator cuff region. Other testing, icnluding neurological screening and strength measures in the distal extremity, returned within normal limits. The patient reports no prior injury or treatment to the same shoulder. Billing records show two similar charges on the same date of service, which are currently under review. Prognosis is guarded but improving, and further evaluation will be scheduled if symptoms persist.
