Treatment history by month

Month and services	Visits	Charges
January 2023: evaluation	1	$288.65
February 2023: imaging, massage therapy, pain management, physical therapy	5	$1,603.09
March 2023: massage therapy	2	$196.34

Treatment summary

Patient presented follwoing a rear impact collision while the patient was turning left at low speed. Presenting complaints included neck pain, stiffness, and headache consistent with cervical strain. Over the course of eight visits, care consisted of manaul therapy, guided range-of-motion exercises, and home exercise instruction. The injury mechanism described is plausible for this type of crash, and the clinical course followed a typical pattern, with symptoms and visit frequency tapering as the patient improved. Examination documented reduced cervical range of motion and paraspinal tenderness, which support the reported injury, while neurological screening and certain orthopedic tests were within normal limits. The patient reports no prior injury to the cervical spine or upper back. Billing reocrds include two similar charges on the same date of service, which are currently under review for accuracy. Prognosis is good with continued home exercise and as-needed follow-up.
