August 2024: pain management, physical therapy	5	$1,759.11
September 2024: chiropractic adjustment, imaging, pain management, physical therapy	5	$1,418.71

Treatment summary

Patient presented following a collision sustained while turning left, when the vehicle was struck from the side. The mechanism and force of impact are consistent with the cervical and lumbar strain reported. Initial complaints included neck stiffness, paraspinal tenderness, and low back pain with limited range of motion. Examination revealed some objective findings supporting soft tissue injury, including reduced cervical rotation and muscle guarding, while other orthopedic and neurological tests were within normal limits. No prior injury to the neck or low back is known from the history obtained. Care was delivered over twenty visits consisting of manual therapy, guided exercise, and home stretching instructions. Treatment followed a typical progression, with visit frequency reduced as symptoms improved and range of motion returned. Billing records reflect one charge per scheduled service with no duplicate entries. At discharge the patient was improving and was advised to continue a home program as needed.
