December 2023: imaging, massage therapy, pain management, physical therapy	6	$2,161.34
January 2024: chiropractic adjustment, imaging, physical therapy	3	$826.16

Treatment summary

Treatment Summary

The patient presented after a rear-end motor vehicle collision with neck pain and stiffness consistent with whiplash-type injury. Over the cuorse of care, the patient attended 21 visits, including physical therapy, range-of-motion exercises, and soft tissue treatment. The course followed a typical pattern, with visit frequency tapering as symptoms gradually improved.

Imaging and physical examination findings clearly confirm the presence of a cervical soft tissue injury. Whether this specific collision caused the injury, however, is not yet clear from the available records. The patient also received treatment for the same body region within the past two years, and that prior condition appears to contribute to the current complaints.

Billing records reflect the services rendered, with no repeated charges for the same services on the same dates. Ongoing monitoring is recommended, and the patient will be reassessed if symptoms change or new concerns arise.
