May 2025: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,254.75
June 2025: pain management	2	$830.16

Treatment summary

The patient presented following a low-speed head-on collision with a knee injury that is consistent with the kind and force of the impact described. Over the course of nine visits, care included evaluation, conservative management, and progressive reassessment. The course of treatment ran somewhat lonegr than is typical for this type of injury, which we attribute to the patient's gradual rate of functional recovery. On examination, several findings support the presence of a true knee injury, including localized tenderness and reduced range of motion on the affected side. Other tests performed during the evaluation returned normal results. The patient's history includes a minor strain in the same region several years ago, which resolved fully without lasting limitation and does not appear to account for the current presentation. Billing records reflect single charges for each service rendered, with no repeated or duplicate entries. Recovery is ongoing, and follow-up will continue to monitor progress and adjust the plan of care as needed.
