July 2024: pain management, physical therapy	5	$1,270.00
August 2024: chiropractic adjustment, imaging, pain management	4	$1,401.00
September 2024: imaging, physical therapy	2	$760.29

Treatment summary

Patient presented following a motor vehicle collision in which their vehicle was struck from the side while the patient was turning left. The reported mechanism of injury is consistent with the type and force of the impact. Presenting complaints involved the right knee, with pain, swelling, and limited range of motion. Imaging and physical examination findings clearly confirm the knee injury, and the patient's history reveals no prior injury to the same area. Conservative management was provided over twelve visits, consisting of physical therapy, joint mobilization, progressive strengthening, and home exercise instruction. Recovery was somewhat slower than typically expected for this type of injury, and the course of care extended beyond the usual timeframe. Billing records reflect single entries for each service without duplicate charges. At the most recent evaluation, the patient had improved in strength and mobility but still reported intermittent discomfort with stairs and prolonged standing. Continued home exercise and activity modification were recommended.
