Month and services	Visits	Charges
July 2024: chiropractic adjustment, evaluation, physical therapy	4	$802.91
August 2024: imaging, massage therapy	2	$1,009.12

Treatment summary

Patient presented following a rear-end motor vehicle collision with neck pain, stiffness, and reduced range of motion consistent with whiplash-type cervical strain. Over the course of six visits, the patient received a structured program of manual therapy, targeted stretching, and graded home exercise. Imaging and examination findings clearly confirm the cervical soft tissue injury, and the objective deficits documented at intake are reflected in the follow-up measurements. No piror injury to the cervical region is known from the patient history or records reviewed. Recovery has been progressing, though it has taken somewhat longer than is typical for this presentation, and the pace of improvement has been gradual. At this stage it is not yet clear whether the injury is wholly attributable to this collision, and further assessment is planned to clarify the causal relationship. Billing records reviewed for the episode show no repeated charges for the same services. Ongoing care will focus on restoring full mobility and strength, with reassessment at defined intervals.
