July 2023: chiropractic adjustment, physical therapy	4	$564.80
August 2023: chiropractic adjustment, physical therapy	2	$281.57

Treatment summary

Treatment Summary

The patient presented following a low-speed collision in a parking lot and was seen for neck and upper back complaints consistent with whiplash-type soft tissue injury. The reported mechanism of injury is in keeping with the pattern of symptoms described at intake. Over the course of 28 visits, care proceeded along a conventional path, beginning with a period of more frequent sessions focused on pain control, range-of-motion work, and graded strengthening. Visit frequency reduced steadily as symptoms improved and the patient regained function. Examination findings included reduced cervical range of motion and localized tenderness in the paraspinal muscles, which support the diagnosis. Some other orthopedic and neurological screening tests were within normal limits. The patient also has a history of treatment to the same region within the past two years, and that prior condition contributes to some of the current symptoms and limitations. Billing records reviewed for this episode show no duplicate or repeated charges for the same services.
