January 2025: chiropractic adjustment, imaging	5	$2,511.69
February 2025: chiropractic adjustment, physical therapy	3	$419.92

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of cervical and lumbar strain. The mechanism of injury is consistent with the reported symptoms, and the force of the impact is in keeping with soft tissue injury to the neck and low back. Imaging and physical examination findings clearly confirm the presence of the injury. No prior injury to the cervical or lmubar regions is known. Over the course of care, the patient has completed approximately 40 visits. Treatment has expanded over several months, with additional modalities and services added over time beyond what is typically required for a strain of this nature. Billing records reviewed show no duplicate or repeated charges for the same services. Ongoing management includes home exercise instruction, activity modification, and periodic reassessment of range of motion and pain levels. Continued monitoring is recommended, with a plan to taper care as symptoms resolve.
