August 2023: imaging, massage therapy	4	$2,290.72
September 2023: chiropractic adjustment, pain management	2	$513.65

Treatment summary

Patient presented following a motor vehcile collision in whcih the patient was struck while turning left at an intersection. Presenting symptoms included headache, dizziness, light sensitivity, and difficulty concentrating, and the reported mechanism of injury is consistent with the force and direction of impact described. Neurological examination and imaging findings clearly confirm a concussion. No prior injury to the head or neck is known from the patient's history. Over the course of care the patient attended 17 visits, a somewhat longer course than is typical for an injury of this type, with gradual improvement in symptoms and graduated return to daily activities. Billing records reflect single charges for each service rendered, with no repeated or duplicate entries. The patient continues to be monitored, and further follow-up is planned as symptoms resolve.
