December 2023: imaging, massage therapy, pain management, physical therapy	5	$1,924.52
January 2024: imaging	3	$1,685.24

Treatment summary

Patient presented following a low-speed head-on collision with reported head impact and symptoms consistent with concussion. The mechanism of injury and the force involved are well matched to the reported presentation. Over the course of 24 visits, care followed a typical progression, with visit frequency tapering as symptoms improved. Several examination findings support the diagnosis, while other neurological and cognitive screeinng results were within normal limits. The chart also documents prior treatment to the same body region within the past two years; that earlier condition appears to contribute to some of the current complaints and has been considered in the overall assessment. Billing records reviewed for this episode of care show no repeated or duplicate charges. Ongoing monitoring and symptom management are recommended, with follow-up as needed.
