August 2023: chiropractic adjustment, pain management, physical therapy	6	$2,679.06
September 2023: chiropractic adjustment, massage therapy, physical therapy	6	$781.99

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting neck pain, stiffness, and headache consistent with cervical whiplash injury. The mechanism of injury described is entirely plausible for a crash of this type. Over the course of 30 visits, care proceeded along a typical rehabilitation pathway, combining manual therapy, targeted stretching, and graded strengthening exercises. Range of motion gradually improved and pain levels decreased, and visit frequency was tapered accordingly as the patient progressed toward functional recovery. Imaging and examination findings clearly confirm the presence of soft tissue injury to the cervical spine. The patient reports no prior injury or treatment to the neck or upper back, and no earlier complaints in this body area are documented in the available records. Billing for services reflects single, non-duplicated charges for each planned treatment, with no repeated billing for the same services. Ongoing monitoring is recommended, with discharge to home exercise as symptoms allow.
