October 2024: chiropractic adjustment, imaging, massage therapy	5	$1,228.85
November 2024: massage therapy, pain management	2	$675.79

Treatment summary

The patient presented following a rear-end motor vehicle collision with a wrist fracture that is consistent with the mechanism of injury described. Imaging and examination findings clearly confirm the fracture, and there is no record of any prior injury to the same area. Care was delivered over 27 visits and followed a typical course, with immobilization, physical therapy, and graduated strengthening exercises. Visit frequency tapered as function returned and pain decreased, and the patient has progressed to independent home exercise with only occasional residual stiffness reported at the most recent review. Billing records reflect single, appropriate charges for each service rendered, with no duplicated or repeated entries. Continued self-management and a follow-up assessment are recommended if symptoms change.
