December 2023: chiropractic adjustment, imaging, pain management	5	$2,934.21
January 2024: chiropractic adjustment, pain management, physical therapy	3	$883.72

Treatment summary

Patient presented following a rear-end motor vehicle collision with compalints of neck and low back pain. The reported injury pattern is consistent with the mechanism and force of the impact. Over the course of 14 visits, care consisted of conservative management including physical therapy, home exercise instruction, and as-needed analgesia, and it followed a typical clinical progression with symptoms tapering as range of motion and function improved. Examination documented paraspinal muscle tenderness and reduced cervical range of motion, supporting a soft tissue strain; however, neurological screening, reflexes, and straight leg raise testing were within normal limits. Review of the record also shows the patient was treated for the same body region within the past two years, and that prior condition appears to contribute to some of the current symptoms. Billing records were reviewed and show no duplicate or repeated charges for services. Prognosis is good with continued home exercise and return to activity as tolerated.
