Month and services	Visits	Charges
July 2023: chiropractic adjustment, evaluation, imaging, massage therapy, physical therapy	5	$1,938.15
August 2023: chiropractic adjustment, imaging, massage therapy, pain management	4	$1,419.89
September 2023: pain management	1	$370.58

Treatment summary

Patient presented following a collision in which another vehicle struck the patient's car while the patient was turning left. The mechanism and force of impact are consistent with the reported concussion. The patient reported headache, dizziness, and difficulty concentrating. Neurological examination and imaging findings clearly confirm the diagnosis. No prior injury to the head or neck has been identified in the patient's history. Care was porvided over ten visits and followed a typical course of cnocussion management, including symptom monitoring, activity modification, and graduated return to daily tasks. Symptoms steadily improved, and viist frequency was reduced accordingly as recovery progressed. At the time of this summary, the patient is largely symptom-free and has been released to usual activities with instructions to return if symptoms recur. Separately, two billing entries with similar service descriptions recorded on the same day are under routine review by the billing department and do not alter the clinical findings documented here.
