Treatment History and Summary

Patient:	Brandi Giles
Treating provider:	Joseph Bradford, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
April 2023: evaluation, imaging, massage therapy	6	$4,025.89
May 2023: imaging, physical therapy	3	$1,303.25
June 2023: chiropractic adjustment, massage therapy, pain management	4	$1,010.43

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of right shoulder pain and restricted range of motion. The mechanism of injury is consistent with the reported symptoms, and the injury pattern is plausible for a crash of this type. Over the course of 13 visits, treatment included physical therapy, home exercise instruction, and periodic reassessment. The course of care ran somewhat longer than is typical for this presentation, and progress was gradual. On examination, several findings support a soft tissue injury to the shoulder, including tenderness along the rotator cuff and pain with resisted abduction. Other tests, including neurovascular screening and imaging-based assessments where performed, were within normal limits. No prior injury or treatment involving the same shoulder is known to this provider. Billing records reviewed for this episode reflect single charges for each visit with no duplicate entries. Plan going forward is continued home exercise and follow-up as needed.
