April 2025: chiropractic adjustment, evaluation, massage therapy, pain management	5	$1,610.72
May 2025: massage therapy, pain management	3	$1,177.51

Treatment summary

Treatment Summary

The patient presented following a rear-end motor vehicle collision with complaints of neck pain and stiffness. The reported injury is consistent with the mechanism and force of the impact. Over the course of eight visits, care consisted of conservative management including soft tissue treatment, range-of-motion exercises, and a home stretching program. Examination revealed muscle tenderness and reduced cervical range of motion, supporting the diagnosis of cervical strain, while neurological screening and reflex testing remained within normal limits. No prior injury to the cervical region is known to the provider or reported by the patient. Treatment followed a typical progression, with visit frequency decreasing as symptoms improved and pain levels declined. Billing records reflect one charge per scheduled service, with no duplicate or repeated billing entries. The patient was discharged to self-directed home exercise with instructions to return if symptmos recur or worsen.
