June 2025: chiropractic adjustment, imaging, physical therapy	5	$2,279.25
July 2025: chiropractic adjustment	1	$80.88

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck pain, stiffness, and headache. Over seven visits, care consisted of supervised physical therapy, range-of-motion exercises, and as-needed anti-inflammatory medication. The reported injury is consistent with the mechanism and force of the collision, and the history of symptom onset aligns with the event. Examination revealed reduced cervical range of motion and paraspinal muscle tenderness, supporting a soft tissue injury to the cervical spine. Other findings, including neurological screening, motor strength, and reflexes, were within normal limits. No prior injury or treatment to the cervical region is known. Care followed a typical course, with visit frequency decreasing as symptoms improved and the patient was discharged to a home exercise program. Billed services align with the documented treatment, with no repeated or duplicate charges identified. Prognosis is good with continued self-directed rehabilitation.
