May 2023: chiropractic adjustment, massage therapy, pain management	5	$1,039.71
June 2023: chiropractic adjustment, massage therapy, physical therapy	4	$501.75

Treatment summary

Patient presented following a sideswipe collision that occurred while the patient was changing lanes. The reported mechanism and force of impact are consistent with the lumbar strain diagnosed at intake. Over the course of 23 visits, treatment followed a conventional progression of manual therapy, guided home exercise, and graded return to activity, and the frequency of visits tapered steadily as symptoms resolved. Imaging and physical examination findings clearly confirm the soft tissue injury. The patient reports a remote, small strain to the same region many years ago, which resolved completely without residual limitation and did not require ongoing care. Billed services correspond to the documented visits, with no repeated charges identified. Current status shows near-full range of motion, minimal tenderness, and independence in daily activities. Continued self-directed exercise is recommended, with follow-up as needed.
