November 2023: imaging, pain management, physical therapy	4	$2,435.62
December 2023: chiropractic adjustment, massage therapy	5	$527.11

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of low back strain. The mechanism of injury is consistent with the reported force of the crash, and the presenting symptoms align closely with that mechanism. Over the course of care the patient completed 42 visits, following a conservative and typical treatment progression that included manual therapy, targeted exercise, and home program instruction. Visit frequency tapered steadily as symptoms resolved and functoinal mobility returned. Imaging and physical examination findings clearly confirm the soft tissue injury to the lumbar region. No prior injury or treatment involving the same body area is known to this provider or documetned in the available records. Billing for services rendered reflects single, appropriately sequenced charges with no repeated procedures. Patient was discharged from active care with a favorable prognosis and instructed to continue independent exercise as needed.
