Month and services	Visits	Charges
October 2024: evaluation	1	$259.38
November 2024: chiropractic adjustment, imaging, pain management, physical therapy	6	$2,727.76
December 2024: massage therapy	1	$108.46

Treatment summary

Patient presented following a sideswipe collision that occurred while the vehicle was changing lanes, reporting neck pain and stiffness with headache radiating to the upper shoulders. Mechanism and force of the impact are consistent with the reported cervical injury. Over the course of eight visits, care consisted of supervised therapeutic exercise, manual therapy, and short-term anti-inflammatory medication, with visit frequency reduced steadily as symptoms improved. Cervical range of motion was restricted in flexion and rotation, with paraspinal muscle tenderness on palpation, while neurological screening, reflexes, and strength testing were within normal limits. The patient has no known prior injury or treatment involving the cervical spine or upper back. Billing records reflect single entries for each service rendered, with no duplicated charges. Patient was discharged from active care with a home exercise program and instructions to return if symptoms recur.
