Treatment history by month

Month and services	Visits	Charges
September 2024: evaluation, massage therapy	2	$367.80
October 2024: chiropractic adjustment, imaging, pain management, physical therapy	5	$1,330.07
November 2024: chiropractic adjustment, massage therapy, pain management	4	$1,583.81
December 2024: pain management	1	$343.50

Treatment summary

Patient presented folloiwng a low-speed head-on collision with complaints of neck pain and stiffness. The reported injury is consistent with the mechanism and force of the impact. Over the course of twelve visits, care followed a typical conservative pathway that included manual therapy, stretching, and a home exercise program. Range of motion was limited on initial examination, with paraspinal muscle tenderness noted on palpation, while neurological screening and reflex testing remained within normal limits. No prior injury to the cervical region is known to this provider. Symptoms improved steadily, and visit frequency was reduced as function returned, with discharge planned once the patient reached expected recovery milestones. Note that two similar billing entries recorded on the same date of service are currently under review for accuracy. Prognosis is good with continued self-management.
