Treatment History and Summary

Patient:	Crystal Yang
Treating provider:	Jennifer Lee, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
January 2025: evaluation	1	$315.01
February 2025: chiropractic adjustment, imaging, massage therapy, pain management	6	$1,369.50
March 2025: imaging, pain management	2	$1,528.23

Treatment summary

Patient presented following a motor vehicle collision in which the patient's vehicle was struck while the patient was turning left. The patient reported low back pain and stiffness beginning shortly after the impact. The mechanism of injury described is consistent with the lumbar strain diagnosed. Over the course of nine visits, care consisted of manual therapy, supervised therapeutic exercise, and home exercise instruction. Treatment contiuned somewhat longer than is typical for a strain of this type, reflecting a slower-than-expected recovery of range of motion. Examination documented paraspinal muscle tenderness and reduced lumbar flexion, findings that support the reported injury. Other testing, including neurological screening and straight leg raise, was within normal limits. The patient reports no prior injury to the lower back. Billing recodrs reflect single charges for each service rendered, with no reepated or duplicate entries. Current assessment is lumbar strain, improving, with an anticipated return to baseline function and discharge from active care once strength and mobility goals are met.
