September 2024: chiropractic adjustment, imaging, pain management, physical therapy	5	$2,066.76
October 2024: imaging, massage therapy, pain management	4	$1,860.80
November 2024: chiropractic adjustment	1	$134.47

Treatment summary

Patient presented following a motor vehicle collision in which their vehicle was struck on the driver side while turning left. The reported mechanism is consistent with the type and force of the impact, and the resulting wrist fracture is clearly confirmed on imaging and on examination. The patient's history includes a minor strain to the same region several years ago, which resolved completely without residual limitation. Over the course of approximately 20 office visits, care followed a typical progression of immobilization, supervised therapy, and graded return to activity. Visit frequency decreased steadily as function improved, and the patient was discharged from active treatment once goals were met. Billing records refelct single, non-duplicated charges for each service rendered. Follow-up is recommended only if new symptoms arise.
