November 2024: imaging, massage therapy, physical therapy	5	$2,650.61
December 2024: imaging	1	$508.81

Treatment summary

Patient presented with lumbar srtain following a sideswipe collision during a lane change. The reported mechanism is consistent with the injury pattern observed on examination, and the findings are in keeping with the force described at the scene. Initial management included rest, anti-inflammatory medication, and guided physical therapy. Over the course of 22 visits, symptoms gradually improved in a manner typical for this type of soft tissue injury, and the frequency of visits was reduced as function returned. Lumbar imaging and clinical examination clearly confirm the strain, with muscle guarding and reduced range of motion documented at presentation. The patient reports no prior injury or treatment to the lower back, and no earlier records of this body region were identified. Billing records reflect single entries for each service rendered, without duplicated charges. At last assessment the patient had regained most of their baseline function and was discharged to a home exercise program with instructions to return if symptoms recur.
