May 2024: chiropractic adjustment, massage therapy, pain management	5	$966.54
June 2024: massage therapy	1	$107.88

Treatment summary

This summary describes the care provided to a patient who presented following a low-speed collision in a parking lot and sustained a fracture of the wrist. The reported mechanism of injury is consistent with the kind and force of the crash. Initial imaging and physical examination clearly confirmed the fracture, and immobilization and supportive care were started promptly. Over the course of twenty visits, treatment followed a typical progression, with frequency of visits tapering as the patient's range of motion, grip strength, and pain levels improved steadily. No prior injury to the same area of the body is known from the patient's history or records. Billing reviewed for this episode of care shows no repeated or duplicate charges for services rendered. The patient is now discharged from active treatment with a stable healing pattern, and follow-up is recommended only if symptoms recur.
