Treatment History and Summary

Patient:	Steve Kelly
Treating provider:	Christopher Walton, DC
Diagnosis:	neck and back strain

Treatment history by month

Month and services	Visits	Charges
October 2024: chiropractic adjustment, evaluation	2	$337.55
November 2024: imaging, pain management, physical therapy	5	$2,269.75
December 2024: imaging, massage therapy	2	$848.89

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with complaints of neck and low back pain. The reported mechanism is consistent with the injuries described, and the patient has no known prior injury to the cervical or lumbar regions. Over the course of nine visits, care consisted of spinal mobilization, soft tissue therapy, home stretching instruction, and graded activity. The treatment followed a typical course, with visit frequency reduced as symptoms improved and the patient was discharged to self-directed exercise. Most of the clinical picture rests on the patient's own pain reports, as cervical and lumbar range of motion, neurological screening, and orthopedic provocation tests were unremarkable, and cervical and lumbar imaging obtained at intake showed no acute abnormality. Two similar treatment charges recorded on the same date of service are under review for billing accuracy. Prognosis is good with continued home exercise.
