Treatment History and Summary

Patient:	Melissa Hawkins
Treating provider:	Morgan Lewis, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
May 2025: evaluation	1	$273.67
June 2025: imaging, pain management, physical therapy	4	$2,022.88
July 2025: chiropractic adjustment, physical therapy	3	$467.48

Treatment summary

Patient presented following a sideswipe collision that occurred during a lane change. The patient reports low back pain with stiffness and muscle tightness across the lumbar region. Over the course of eight visits, care consisted of manual therapy, guided stretching, and a home exercise program. Palpation revealed paraspinal muscle tenderness and reduced range of motion in forward flexion, consistent with a soft tissue strain. Neurological screening, including reflexes and sensation in the lower extremities, was within normal limits. Straight leg raise testing was negative. The reported severity of symptoms is considerably greater than what would ordinarily be expected from the mechanism described, and the course of treatment extended somewhat beyond the typical timeframe for a lumbar strain of this kind. The patient reports no prior injury or treatment involving the lower back. Billing records reviewed for this episode of care show no duplicate or repeated charges. Ongoing management includes continued home exercise and reassessment at follow-up.
